

Macadamia Management Calendar

Cane Management Calendar

CROP CLASS	OPERATION	SEPT	OCT	NOV	DEC	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	
PLANT CANE	PLANTING AND EARLY GROWTH	Cane planting season			Cane reaches 'out of hand stage' - too tall to get machinery over						Ground prepared for planting. M1 mud amendments applied if required			
	FERTILISING	Planting mix applied during planting operation - usually a N.P.K mix or N, P mix			Bluk of nitrogen fertiliser applied to established cane. Usually urea.				Soil test for fertiliser recommendations.					
	PEST & DISEASE CONTROL	Fungicide & insecticide applied to setts at planting			Spray for pests as required. Usually only in response to pest outbreak.			Cane to be used as planting material checked and tested for diseases.						
	WEED CONTROL	Weeds controlled by herbicides and/or mechanical cultivation. Continues up to 'out of hand stage'. For herbicides a minimum of two sprayings.												
	OTHER OPERATIONS	Slashing/spraying operations on headlands and drains to control weeds.												
	HARVESTING	Harvesting commences around mid June and continues to around mid December (approx. 24 week harvest season).												
RATOONS	WEEDS	Boom spray with recommended pre-emergent & knockdown chemicals before 4 leaf stage; at 'out of hand stage' use directed spray with knockdown/pre-emergent chemicals. Mechanical clutivation is an alternative option.												
	FERTISLING	A single (or split) application of nitrogen fertiliser (eg.Urea) applied after previous crop harvested. In some cases an N.P.K. mix or an N. S mix may be used.												
	PEST & DISEASE CONTROL	Spray for pests as required. Usually only in response to pest outbreak.						Cane to be used as planting material check/tested for disease						
SOY BEAN FALLOW		Ploughout old cane ratoons		Plant soybean					Harvest soybean		Prepare ground for cane.
